This second edition of the author's two previous books on designing advanced hardware and software systems offers over 1000 pages of complete coverage of this evolving industry. Topics covered include the process of problem solving and architecture, requirements and specification, performance analysis, prototypes, tools, and documentation. This new edition adds recent trends in hardware, software, and process innovations that will affect your design process. This book also includes two new case studies, "Designed for Digital Media," and "Asynchronous WLANs." \*TBD\* \$149.95 Add to Cart In this practical, in-depth book you will learn the most effective architectural design approaches that can be used to create software and hardware systems that will work within the constraints of today's heterogeneous and multisenario environments. The book provides a wealth of real-world examples to illustrate the techniques covered in each chapter. There are many practical engineering and management applications of this theory to be used in the development of systems and components. The following topics are covered in the book: Fundamentals of Architecture -Architecture of a Multitasking System -Architecture of an Operating System -Architecture of an Application -Architecture of an Integrated System -Architecture of a Virtualized System -Architecture of a Distributed System -Architecture of Network-Based Systems -Architecture of Wireless Systems -Architecture of Object-Oriented Systems -Architecture of Hardware Systems -Architecture of a Service-Oriented System -Architecture of a Software-Oriented System -Architecture of a Hybrid System -Architecture of Internet-Based Systems -Architecture of a Communication-Oriented System -Architecture of a Multimedia System -Architecture of a Multimedia and Information-Oriented System -Architecture of a Process System -Architecture of a Hybrid-Oriented System -Architecture of a Domain-Oriented System -Architecture of an Embedded System -Architecture of a System of Systems -Architecture of Service-Oriented Systems -Architecture of 82157476af
